The flowchart illustrates the calculation of GHG emissions for international flights. It starts with four input boxes at the top: [1] Emission Factor, [2] Weight, [3] Distance, and [4] Conversion Factor. Arrows lead from these inputs to a central calculation box. The formula shown is:
$$\text{Emission Factor} \times \text{Weight} \times \text{Distance} \times \text{Conversion Factor} \times 100$$
 Below the formula, the units are specified: Emission Factor (kg CO₂e/kg fuel), Weight (kg), Distance (km), and Conversion Factor (kg CO₂e/kg fuel). The result is then divided by 1000 to get the final GHG emissions in kg CO₂e. The final output is shown in a box labeled 'GHG emissions (kg CO₂e)'. The flowchart also includes a note about the data sources: 'Data sources: Emission Factors Hub, World Input-Output Database (WIOD), UK DEFRA, Conversion Factors, US EPA, GHG'. The flowchart is dated 2023.
